

Data Sheet

FORECLAD 200 - F200WL

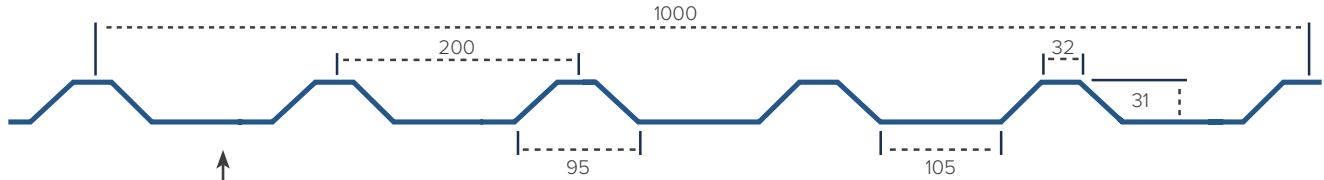

Foreclad 200 can also be manufactured as the profile F200WL and can be used for both roofs and walls. This is supplied in 0.7mm steel

As with plastisol material, the polyester painted steel sheets also have a backing coat to offer a degree of protection to the reverse of the sheet.

The steel is coated in bright white polyester paint and is intended for internal applications. White is chosen due to its good light reflectivity.

It is also possible to manufacture F200WL from alternative materials and colours if needed. Please enquire with our sales offices if required.

* White liner face to the under side of the sheet as standard.
